A CRM APPLICATION FOR THECHAISHOP&CO

User Story

As a sales representative at TheChaiShop&Co, I need a CRM application to efficiently manage customer relationships and sales activities. The system should allow me to access and update employer details, categorize customers as online or offline using record types, and automatically calculate order quantities and total bill amounts. Additionally, the application should generate reports and dashboards for sales analysis and send automated birthday email notifications with special offers to improve customer engagement.

1. Introduction

1.1 Project Overview

The project “CRM Application for TheChaiShop&Co” focuses on developing a Salesforce-based Customer Relationship Management (CRM) system to manage customer and employer accounts effectively. The application automates sales processes, maintains organized customer records, generates analytical reports and dashboards, and enhances customer engagement through automated notifications. The project objectives and user requirements are defined in the initial section of this document.

1.2 Purpose :

- Improve the management of customer relationships in an efficient manner.
- Automate the calculation of orders and billing processes.
- Ensure better accuracy and reliability of customer and sales data.

- Support informed decision-making through data analysis and insights.
- Increase customer engagement by sending automated email notifications.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Sales Representative	Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	Stressed and inefficient
PS-3	Store Manager	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied
PS-4	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and undervalued

Problem Statements – TheChaiShop&Co CRM Application

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1		Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	
PS-2	Sales Representative	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Stressed and inefficient
PS-2		Monitor sales and customer ecords	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied
PS-3	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and undervalued

2.2 Empathy Map Canvas

Target Users

- Sales Representatives
- Managers
- System Administrators
- Business Analysts

Empathy Analysis

Aspect	Description
Think & Feel	Need accurate customer data and reports
Hear	Feedback from management

See	Multiple registers and spreadsheets
Say & Do	Enter data manually
Pain	Errors, delays, data loss
Gain	Automation, fast reports

2.3 Brainstorming

Brainstormed Ideas

- Manual CRM system
- Excel-based management
- Web-based CRM
- Salesforce-based CRM
- Automated email system

Selected Idea:

Salesforce-based CRM Application for TheChaiShop&Co..

3.REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages:

- Login
- Access CRM Application
- Enter Customer Data
- Generate Orders
- Calculate Bills
- View Reports
- Decision Making

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	User Login
FR-2	Object Creation
FR-3	Data Entry
FR-4	Billing Automation
FR-5	Report Generation
FR-6	Email Automation

Non-Functional Requirements

NFR-1: Usability

The CRM system should be easy to use for all users without technical training.

Requirements:

- Simple user interface
- Clear navigation menus
- Easy-to-use forms
- User-friendly dashboards

Example:

A sales employee should be able to log in, enter customer details, and create orders quickly. Salesforce Lightning provides simple navigation and drag-and-drop features.

NFR-2: Security

The system must protect customer and business data from unauthorized access.

Requirements:

- Role-based access control
- Secure login authentication
- Encrypted data storage
- Data backup and recovery

Examples:

Profiles and permission sets, object-level and field-level security, restricted access to billing information, and strong password policies.

NFR-3: Reliability

The CRM system should work consistently and store data accurately without loss.

Requirements:

- Automatic data saving
- Regular system backups
- Error handling mechanisms
- Stable cloud infrastructure

Example:

If the internet disconnects while entering order data, the system should save and restore the information later. Salesforce cloud supports automatic backups.

NFR-4: Performance

The system should respond quickly and handle large amounts of data efficiently.

Requirements:

- Fast page loading
- Quick report generation
- Smooth dashboard performance
- Minimal system delay

Example:

Monthly sales reports for many customers should load within a few seconds.

NFR-5: Availability

The CRM system should be accessible whenever users need it.

Requirements:

- 24/7 system availability
- Minimal downtime
- Cloud-based hosting
- Disaster recovery support

Example:

Managers should be able to access the system anytime, including weekends or late hours.

NFR-6: Scalability

The system should support business growth without reducing performance.

Requirements:

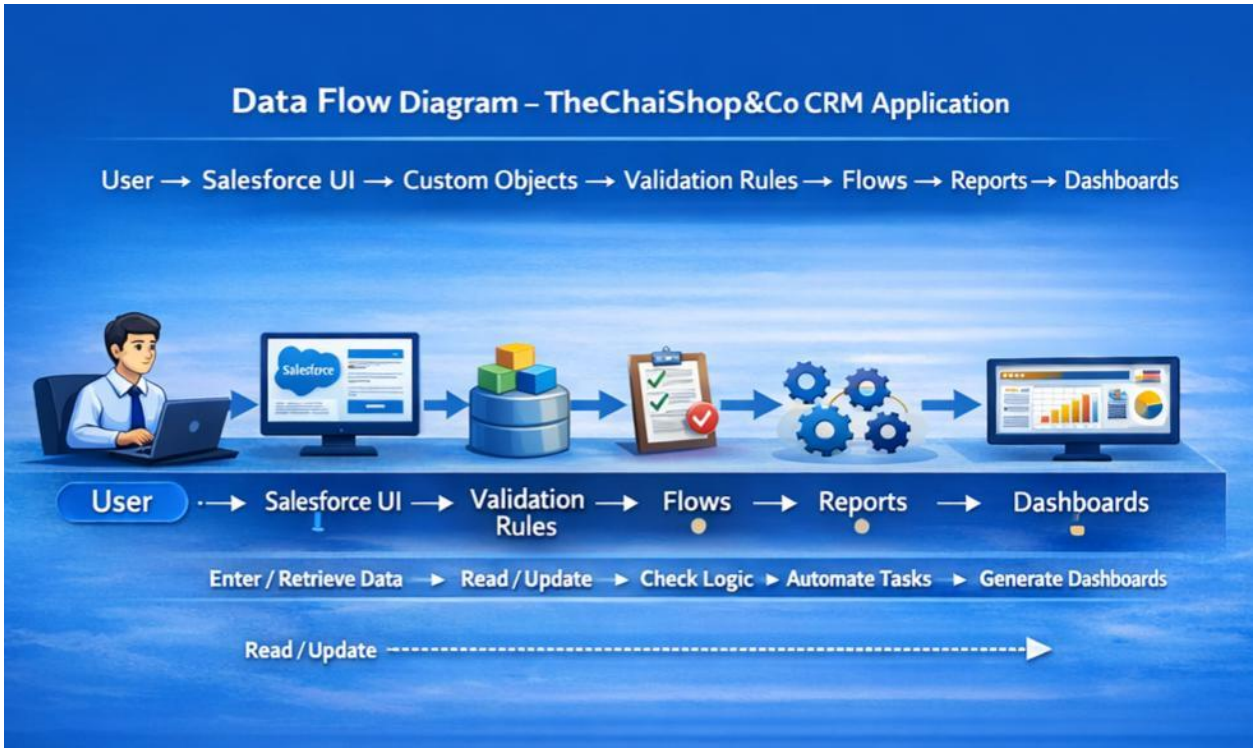
- Support more users
- Handle increasing customer data
- Expandable storage
- Maintain system speed

Example:

If TheChaiShop&Co expands to multiple branches, the system should handle thousands of customers efficiently.

3.3 Data Flow Diagram

User → Salesforce UI → Custom Objects → Validation Rules → Flows → Reports →Dashboards.



3.4 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning
Database	Salesforce Cloud
Automation	Flows
Backend	Salesforce Platform
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The CRM system replaces manual records with automated data management. Cloud Storage prevents data loss, dashboards improve analysis, and real-time reports eliminate Delays. This ensures accurate and timely business insights generation.

4.2 Proposed Solution

Functional Requirements

Parameter	Description
User Login & Authentication	Secure login for authorized users.
Customer Record Management	Manage customer information.
Employer & Enterprise Management	Manage employer and enterprise accounts.
Order Management	Create and track customer orders.
Automated Billing System	Automatically calculate total bill.
Validation Rules	Ensure correct data entry.
Record Types & Page Layouts	Different layouts for different records.
Global Picklists	Standard values for fields.

Email Notification System	Send automated customer emails.
Workflow & Flow Automation	Automate tasks and alerts.
Report Generation	Generate sales and customer reports.
Dashboard Visualization	Display data using dashboards.
Data Backup & Recovery	Secure data storage and recovery.
User Role Management	Control access using roles and permissions.

4.3 Solution Architecture

Architecture Layers

1. Presentation Layer – Lightning UI
2. Application Layer – Flows and Logic
3. Data Layer – Custom Objects
4. Analytics Layer – Reports and Dashboards

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- The project followed an Agile-based development approach with defined

  Milestones and sprints.

- A Salesforce Developer account was created to set up the development Environment.
- Custom objects were designed to store customer, employer, and enterprise data.
- Custom tabs and a Lightning Application were developed for easy system

Navigation.

- Fields, relationships, and global picklists were configured to ensure data

  Consistency.

- Page layouts and record types were created based on user roles and customer

  Categories.

- Validation rules were implemented to prevent incorrect data entry.
- Email templates and automated flows were developed for customer notifications.
- Reports and dashboards were created for performance monitoring and analysis.
- Regular sprint reviews and testing were conducted to track progress and resolve Issues.
- The project was completed within the planned timeline through systematic Scheduling.

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As an admin, I want to create a Salesforce developer account to configure and deploy the CRM application.	1	High	S. Swetha

Sprint-1	Data Modeling	USN-2	As an admin, I want to create Customer, Employer, and Enterprise objects to store business data.	3	High	S. Sujitha
Sprint-2	Data Modeling	USN-3	As a user, I want separate tabs for each object to easily access CRM records.	3	High	R.sugapriya
Sprint-2	Data Modeling	USN-4	As a manager, I want a Lightning App so all CRM operations are accessible in one place.	3	High	M. Shafana
Sprint-2	Data Modeling	USN-5	As an admin, I want custom fields to capture sales and billing details.	5	Medium	S. Swetha
Sprint-2	Data Modeling	USN-6	As a user, I want customized page layouts for better data display.	5	High	S. Sujitha
Sprint-2	Data Modeling	USN-7	As a manager, I want record types for Retail and Enterprise customers.	5	Medium	R.Sugapriya
Sprint-3	Automation	USN-8	As a system, I want validation rules to prevent incorrect data entry.	3	High	M. Shafana
Sprint-3	Automation	USN-9	As a system, I want automated flows	5	High	S. Swetha

			to send customer notifications.			
Sprint-4	Automation	USN-10	As a system, I want automatic billing calculation for invoices.	5	High	S. Sujitha
Sprint-5	Reports	USN-11	As a manager, I want sales and customer reports to monitor business performance.	4	High	R.Sugapriy
Sprint-6	Dashboards	USN-12	As a manager, I want visual dashboards to analyze sales and customer data.	4	Medium	M. Shafana

Project Tracker, Velocity & Burndown Chart:

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	2 Mar 2026	8 Mar 2026	20	8 Mar 2026
Sprint-2	20	6 Days	2 Mar 2026	8 Mar 2026		
Sprint-3	20	6 Days	2 Mar 2026	8 Mar 2026		
Sprint-4	20	6 Days	2 Mar 2026	8 Mar 2026		

5.Project Development Phase:

Project Flow

Milestone 1 : Creation of developer account

Milestone 2 : Object Creation

Milestone 3 : Tabs

Milestone 4 : The Lightning App

Milestone 5 : Global Picklist

Milestone 6 : Fields and Relationships

Milestone 7 : Creation of Page Layout

Milestone 8 : Creation of Record Types

Milestone 9 : Validation rules

Milestone 10 : Email Templates

Milestone 11 : Flows

Milestone 12 : Reports and Dashboards

Milestone 13 : Conclusion

What you'll learn

1. Real Time Salesforce Project

2. Standard and Custom objects

3. Picklist Value sets

4. Types of Fields & their relationships.

5.Page Layouts

6.Record Types

7.alidation Rules

8.mail Templates

9.Flows

10.Reports and Dashboards.

Implementation

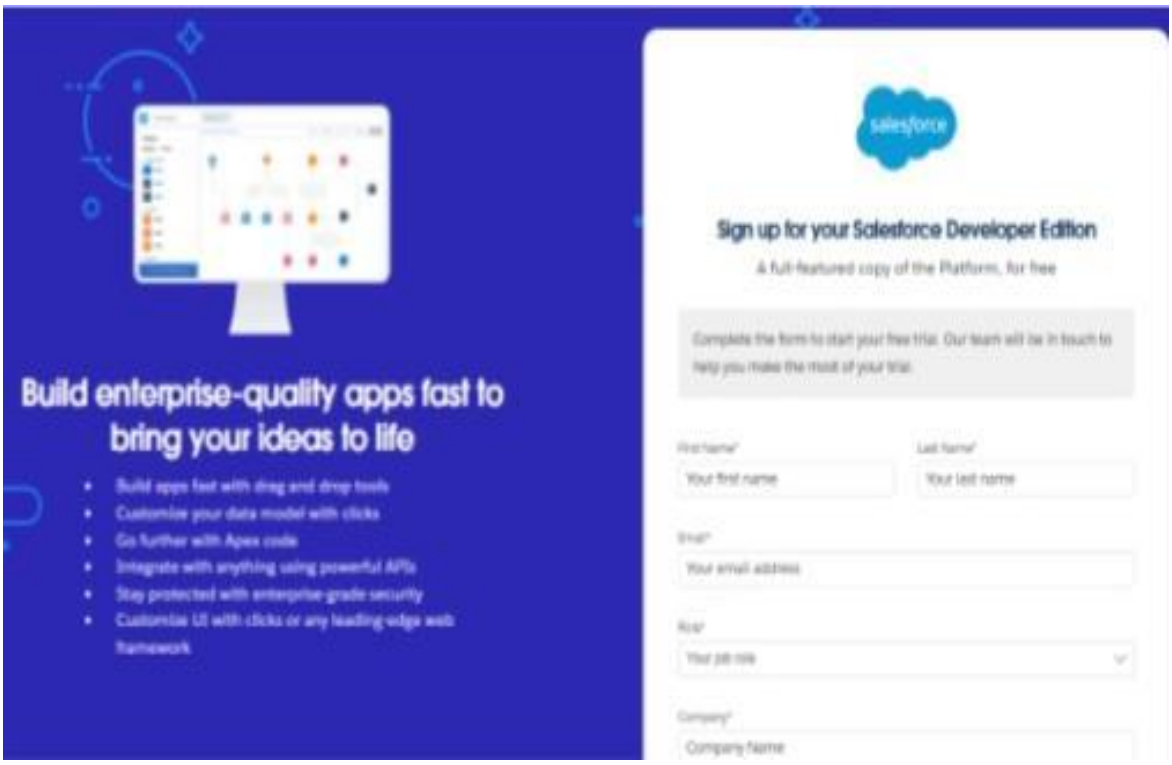
Milestone 1 – Salesforce developer account creation :

Activity 1: Creating Developer Account:

Creating a developer org in salesforce.

1.Go to https://developer.salesforce.com/signup

2.On the sign up form, enter the following details :



1.First name & Last name

2.Email

3.Role : Developer

4.Company : College or Company Name

5.County : India

6. Postal Code : pin code

7.Username : should be a combination of your name and company

This need not be an actual email id, you can give anything in that format :

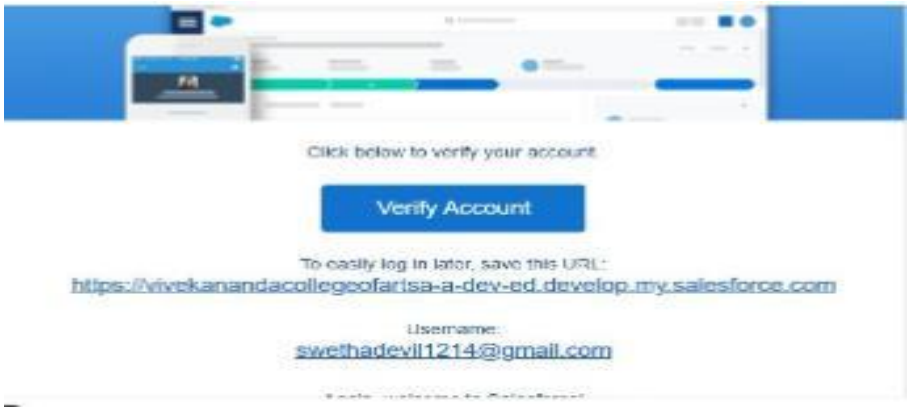
username@organization.com

Click on sign me up after filling these.

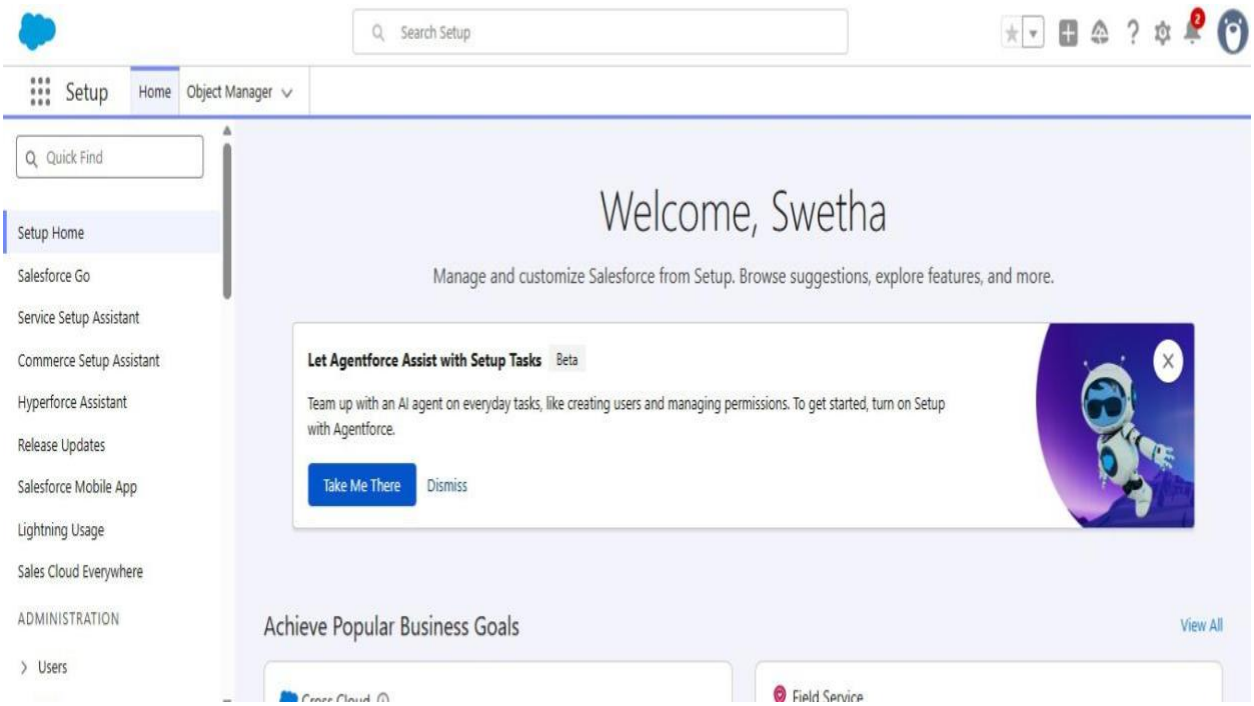
Activity 2: Account Activation :

1. Go to the inbox of the email that you used while signing up. Click on the verify

Account to activate your account. The email may take 5-10mins.

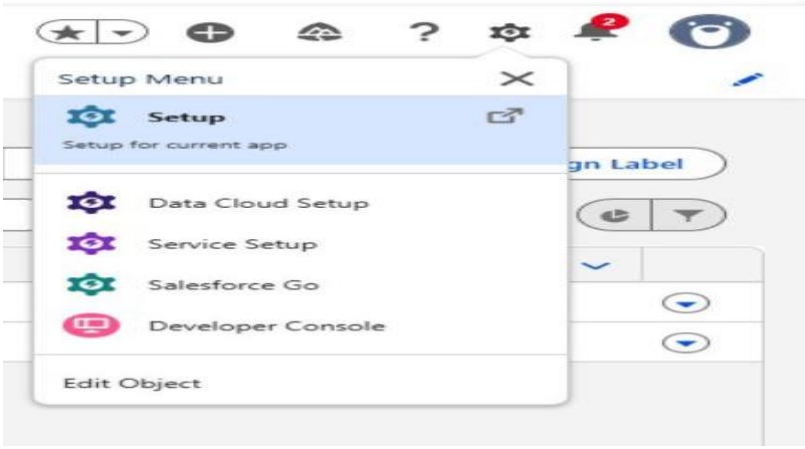


2. Click on Verify Account.
3. Give a password and answer a security question and click on change password.
4. Then you will redirect to your salesforce setup page.

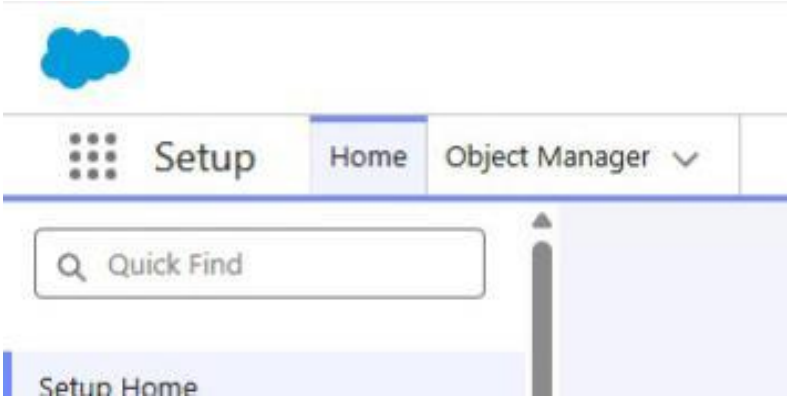


Milestone 2 – Objects

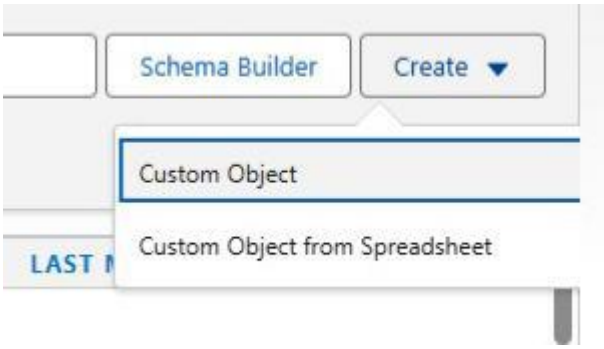
1. In your Salesforce org, click gear icon on the top left and select Setup to Open Setup.



2. Click the Object Manager tab. If you don't see it, enter Object Manager in the Quick Find box.



3. On the Object Manager page, click Create | Custom Object.



Activity 1 : Employer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- Label : Employer Account
- Plural Label : Employer Accounts
- Enter Record Name Label and Format

  Record Name : Employer Account Name

  Data Type : Text

- In Optional features : check the boxes for Allow Reports | Allow Activities
  | Track Field History.
- Search Status : check the box for Allow Search.
- Save

Activity 2 : Customer Account Object

1. From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

- Label : Customer Account
- Plural Label : Customer Accounts
- Enter Record Name Label and Format

  Record Name : Customer Account Name

  Data Type : Text

- In Optional features : check the boxes for Allow Reports | Allow Activities

  | Track Field History.

- Search Status : check the box for Allow Search.
- Save.

Activity 3 : Enterprise Account Object

- From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.
- Label : Enterprise Account
- Plural Label : Enterprise Accounts
- Enter Record Name Label and Format

  Record Name : Enterprise Account Name

  Data Type : Text

- In Optional features : check the boxes for Allow Reports | Allow Activities

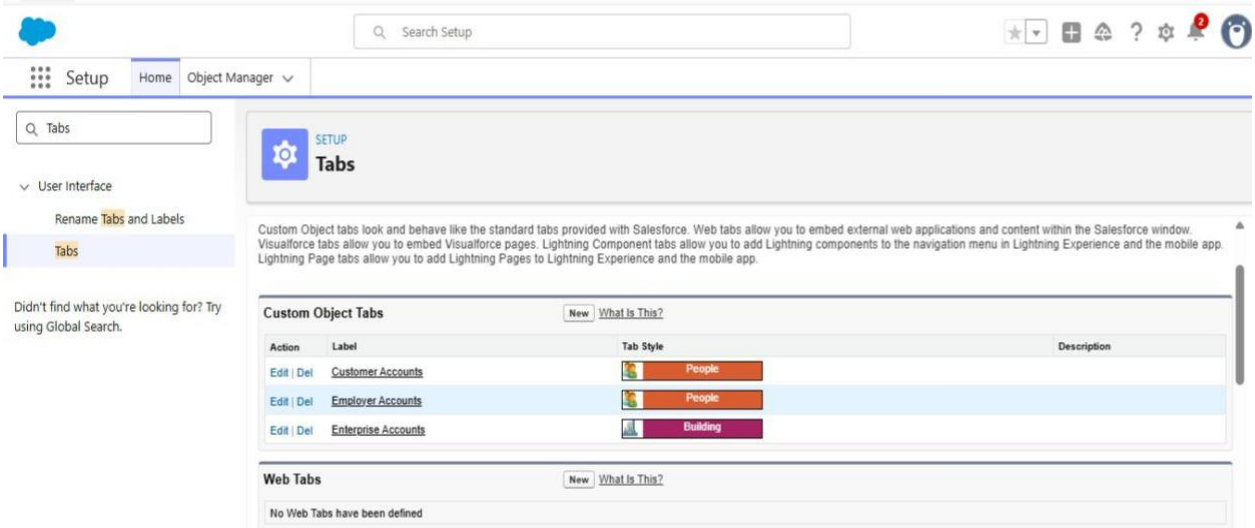
  | Track Field History.

- Search Status : check the box for Allow Search.
- Save

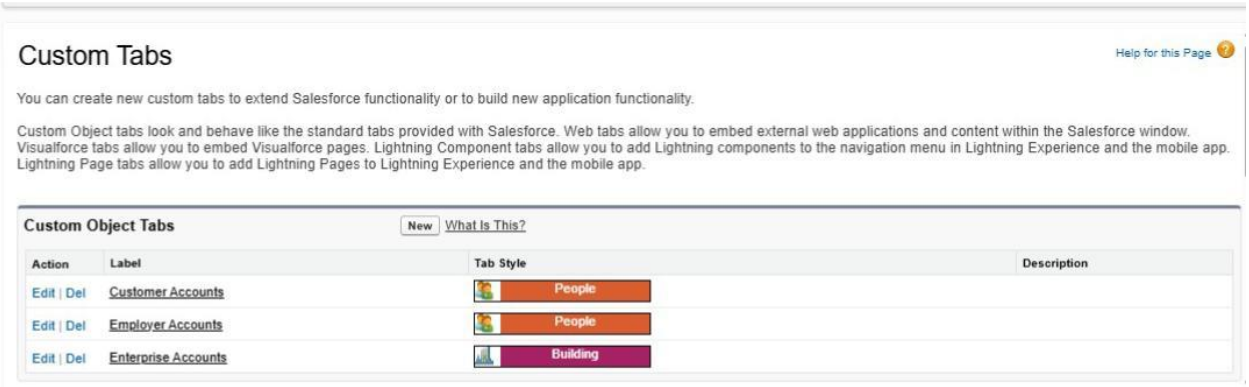
Milestone 3 – Tabs

Activity 1 : Custom tabs creation

1. Go to setup page → type Tabs in Quick Find bar → click on tabs → New(under custom object tab)



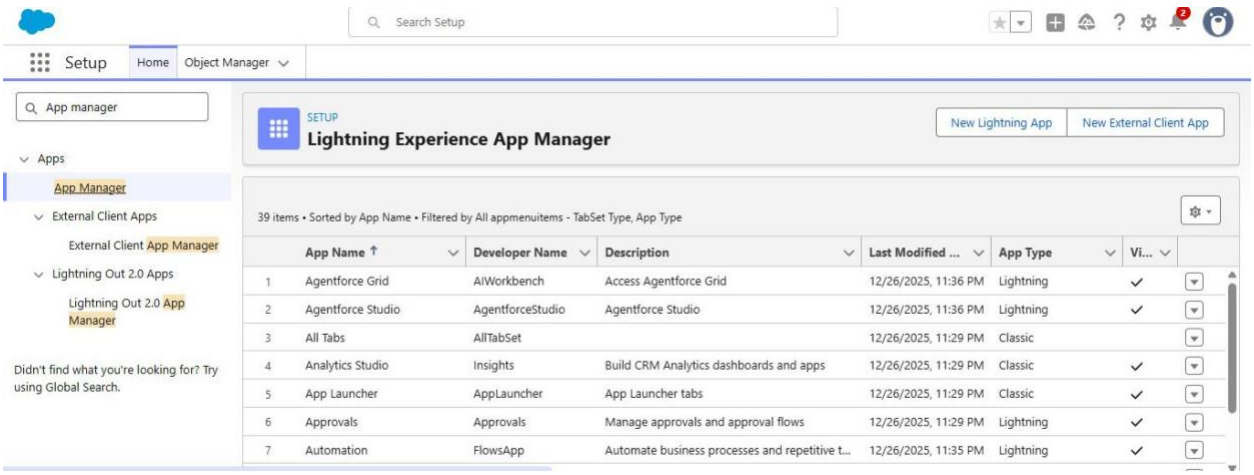
2. Select Object(Employer Accounts) → Select the tab style → Next (Add to Profiles page) keep it as default → Next (Add to Custom App) uncheck The include tab .
3. Make sure that the Append tab to users' existing personal customizations Is checked.
4. Click save.
5. Repeat the same steps for Customer Accounts and Enterprise Accounts.



Milestone 4 – The Lightning App

Activity 1 : Create a lightning app

1. Go to setup page → search “app manager” in quick find → select “app manager”→ click on New lightning App.



2. Fill the app name in app details and branding as follow

   App Name : TheChaiShop&Co

   Developer Name : Auto Populates

   Add image optional (if you want to give any image you can otherwise not Mandatory) – Add Primary color Hex or leave it to default Then click Next.

3. In App options

   Navigation style : Standard navigation

   Setup experience : setup

Supporters form factors : Desktop and phone

Then click Next

4. In Utility items

Utility Bar alignment : Default

Then click Next.

5. Navigation items

Select the created Custom Objects and required standard objects

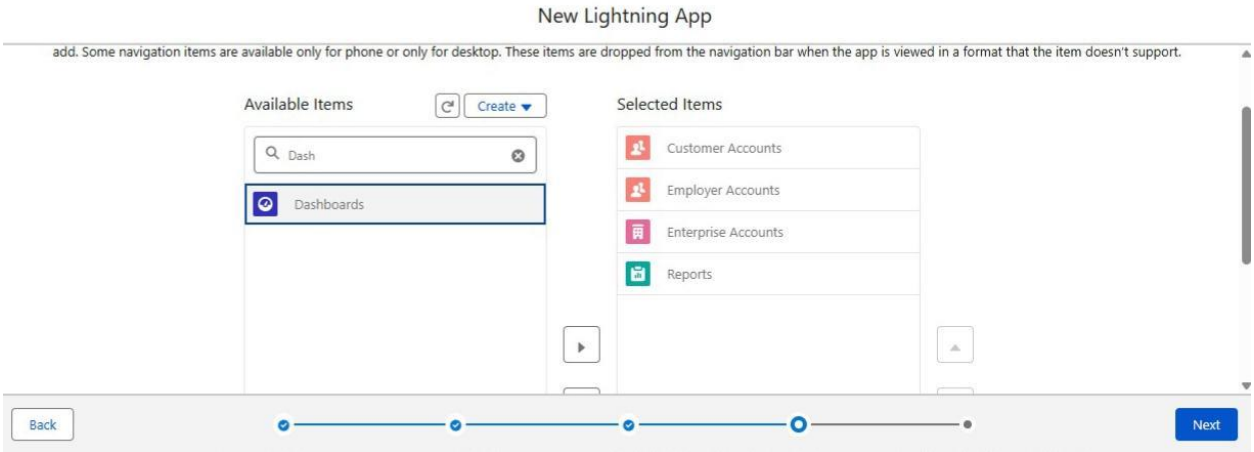
- Customer Accounts

Employer Accounts

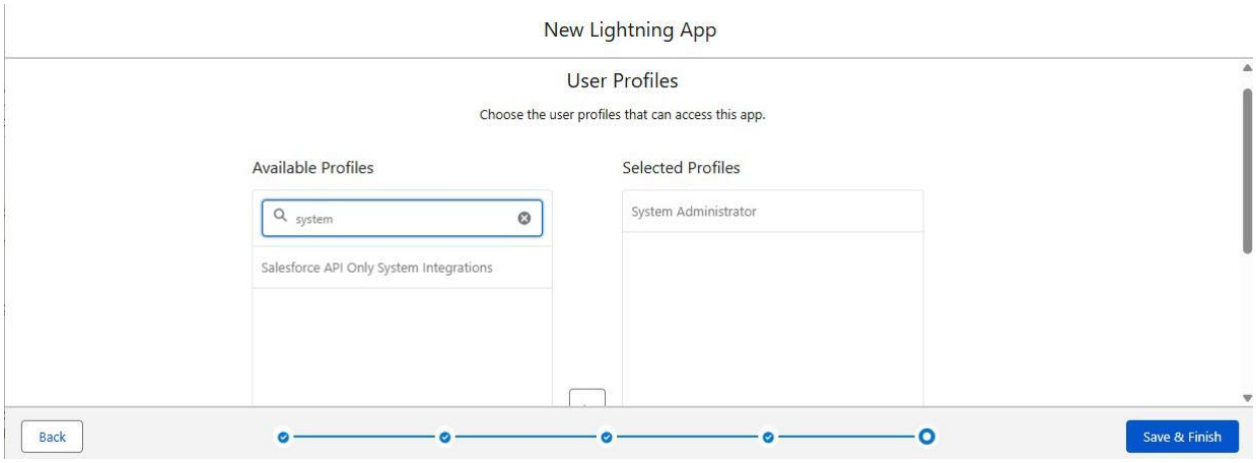
Enterprise Accounts

Reports

Dashboards



6. To Add User Profiles : System Administrator

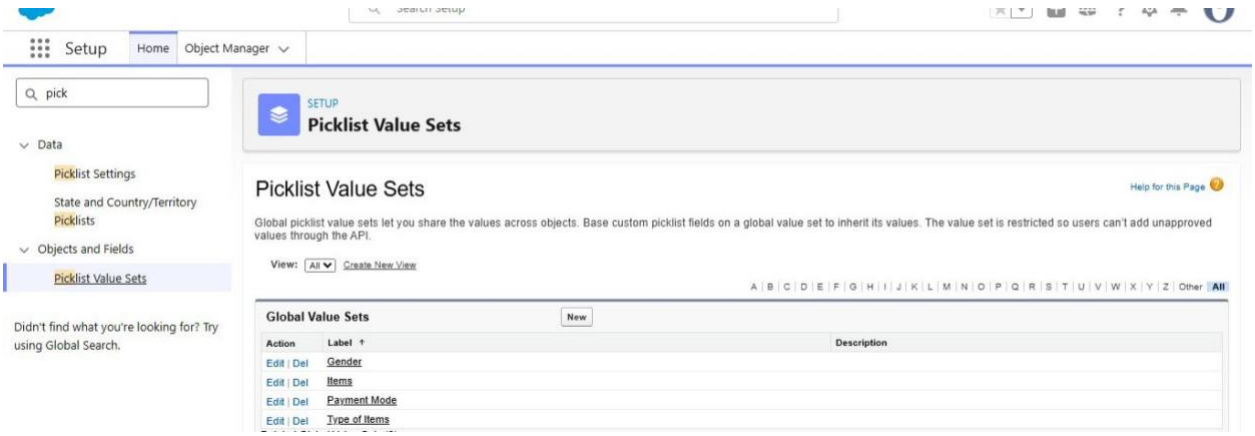


7. Click Save & Finish.

Milestone 5 : Global Picklist

Activity 1 : Create Global Picklist

1. In Quick find box search for : Picklist value sets and click New.



- Label : Gender

  Name : Auto Populates

  Values : Male

Female

Others

Click Save & New.

2. Create three more Global picklists following the same steps.

- Label : Items

  Name : Auto populates

  Values : Platinum Tea Powder

  Double Delight Tea Powder

  Super Dust Tea Powder

  Osmania Biscuits (Value Pack)

  Osmania Biscuits (Premium Pack)

  Dry Fruit Biscuits

  Fruit Biscuits

  Salt Biscuits

  Multigrain Biscuits

Ragi Biscuits

Double Choco Chip Cookies

Butter Almond Cookies

Melting Moments Cookies

Honey Oats Cookies

Delight Box

Signature Box

Assorted Box

Click Save & New.

Label : Payment Mode

Name : Auto populates

Values : Gpay

PhonePe

Paytm

Credit or Debit card

Cash.

Click Save & New.

Label : Type of Items

Name : Auto populates

Values : Tea powder

Cookies

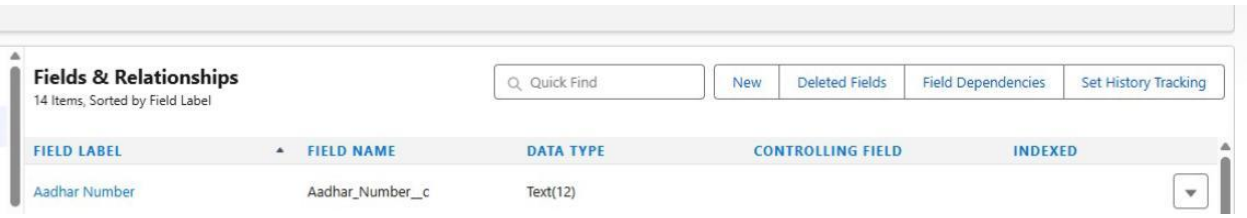
Gift Hampers

Click Save.

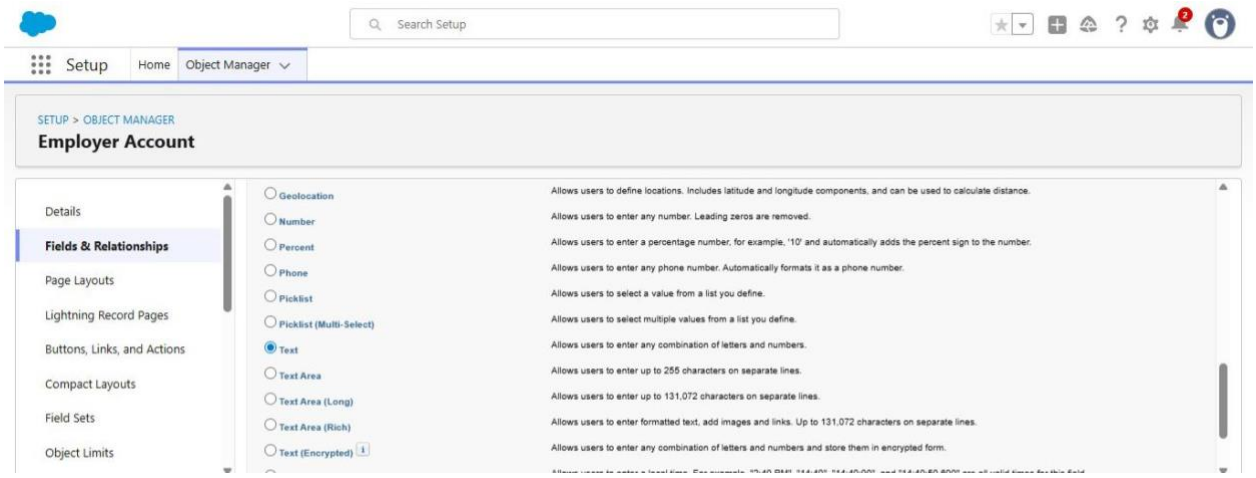
Milestone 6 : Fields & Relationships

Activity 1 : Create Custom fields for Employer Account

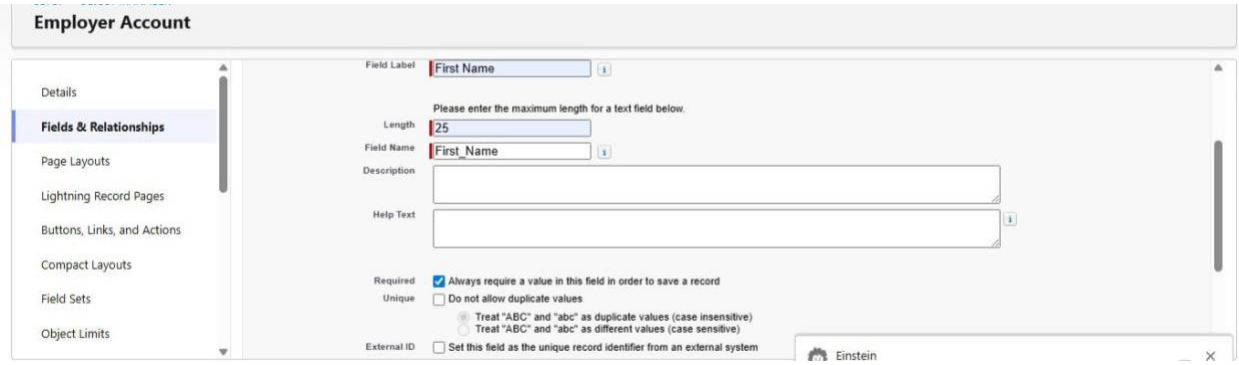
1. In your Salesforce org, click gear icon on the top left and select Setup to open Setup.
2. Click the Object Manager tab. If you don't see it, enter Object Manager in the quick Find box.
3. From the object manager page, In the Quick Find box, Search for the custom Object you just created : Employer Account
4. From the sidebar, click Fields & Relationships. Notice that there are already Some fields there. Those are the standard fields.
5. Click New to create a custom field. Tip: Before creating a new field, do a quick Search to make sure a similar one doesn't already exist.



6. Next, choose a data type as Text. Choosing a data type helps you format the field Input.



7. Click on next.



8. Data Type : Text

   Field Label: First Name

   Field Name : Auto Populate

   Length : 25

   Required : Check the box

Click on Next → Next → Save and new.

9. Repeat the Same steps for remaining fields

- Data Type : Text

  Field Label: Last Name

  Field Name : Auto Populates

  Length : 25

  Required : Check the box

  Click on Next → Next → Save and new.

- Data Type : PickList

  Field Label: Gender

  Values : Use Global Picklist value set and

  Select Gender from the dropdown menu.

  Field Name : Auto Populates.

  Required : Check the box

  Click on Next → Next → Save and new.

- Data Type : Phone

  Field Label : Phone Number

Field Name : Auto Populates

Required : Check the box

Click on Next → Next → Save and new.

- Data Type : Email

  Field Label : Email ID

  Field Name : Auto Populates

  Required : Check the box

  Click on Next → Next → Save and new.

- Data Type : Date

  Field Label : Date of Birth

  Field Name : Auto Populates

  Required : check the box

  Click on Next → Next → Save and new.

- Data Type : Text

  Field Label : Aadhar Number

  Field Name : Auto Populates

  Length : 12

  Click on Next → Next → Save and new.

- Data Type : Text

  Field Label : PAN Details

  Field Name : PAN_Details

  Length : 10

  Click on Next → Next → Save and new.

- Data Type : Picklist

  Field Label : Designation

  Field Name : Auto Populates

  Value : Enter value, with each value separated by a new line.

  Manager

  Finance and Accounting

  Kitchen Staff

  Cashier

  Servers

  Click on Next → Next → Save and new.

- Data Type : Currency

  Field Label : Salary

  Field Name : Auto Populates

  Click on Next → Next → Save.

Activity 2: Create Custom fields for Customer Account

- Create a Text field called First Name, set the length to 25, check Required, and click Next → Next → Save & New.
- Create a Text field called Last Name, set the length to 25, check Required, and click Next → Next → Save & New.
- Create a Picklist field called Gender, select Gender from Global Picklist, check Required, and click Next → Next → Save & New.
- Create a Phone field called Phone Number, check Required, and click Next → Next → Save & New.
- Create a Date field called Date of Birth, check Required, and click Next → Next → Save & New.
- Create a Formula field called Date of Birthday is Today?, choose Checkbox return type, enter the formula, and click Next → Next → Save & New.
- Create an Email field called Email ID, check Required, and click Next → Next → Save & New.
- Create a Text field called Address with length 125, and click Next → Next → Save & New.
- Create a Multi-Select Picklist called Type of Items, select Type of Items from Global Picklist, check Required, and click Next → Next → Save & New.
- Create a Multi-Select Picklist called Products Purchased, select Items from Global Picklist, check Required, and click Next → Next → Save & New.
- Create a Multi-Select Picklist called Chai, enter tea values line by line, and click Next → Next → Save & New.

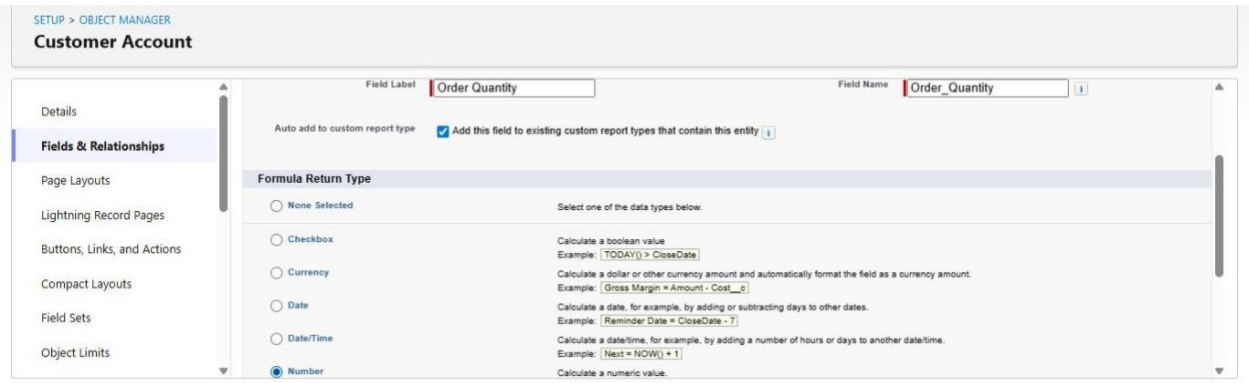
- Create a Picklist field called Payment Mode, select Payment Mode from Global Picklist, check Required, and click Next → Next → Save & New.
- Create a Lookup Relationship called Associated Employer, select Employer Account, and click Next → Next → Save.

Data Type : Formula

Field Label : Order Quantity

Field Name : Auto Populates

Formula Return : Number



Enter Formula = Quantity (Number) =

IF(INCLUDES(Products_Purchased__c , “Platinum Tea Powder”), 1, 0) +

IF(INCLUDES(Products_Purchased__c , “Double Delight Tea Powder”), 1, 0) +

IF(INCLUDES(Products_Purchased__c , “Super Dust Tea Powder”) , 1, 0) +

IF(INCLUDES(Products_Purchased__c , “Osmania Biscuits (Value Pack)”), 1, 0) +

IF(INCLUDES(Products_Purchased__c , “Osmania Biscuits (Premium Pack)”), 1, 0) +

IF(INCLUDES(Chai__c , “Sugar Free Tea”), 55, 0)

Click on Next → Next → Save.

Activity 3: Create Custom Fields for Enterprise Account :

- Create a Text field called Enterprise Name, set length 25, check Required, and click Next → Next → Save & New.
- Create a Phone field called Phone Number, check Required, and click Next → Next → Save & New.
- Create an Email field called Email ID, check Required, and click Next → Next → Save & New.
- Create a Text field called Address, set length 125, and click Next → Next → Save & New.
- Create a Multi-Select Picklist called Type of Items, select Type of Items from Global Picklist, check Required, and click Next → Next → Save & New.

- Create a Multi-Select Picklist called Products Purchased, select Items from Global Picklist, check Required, and click Next → Next → Save & New.
- Create a Lookup Relationship called Associated Employer, select Employer Account, and click Next → Next → Save & New.
- Create a Formula field called Order Quantity, choose Return Type: Number, enter the formula to calculate quantity based on selected products, and click Next → Next → Save & New.
- Create a Formula field called Total Bill, choose Return Type: Number, enter the formula to calculate the total price of selected products, and click Next → Next → Save & New.
- Create a Picklist field called Payment Mode, select Payment Mode from Global Picklist, check Required, and click Next → Next → Save.

Milestone 7 : Page Layouts

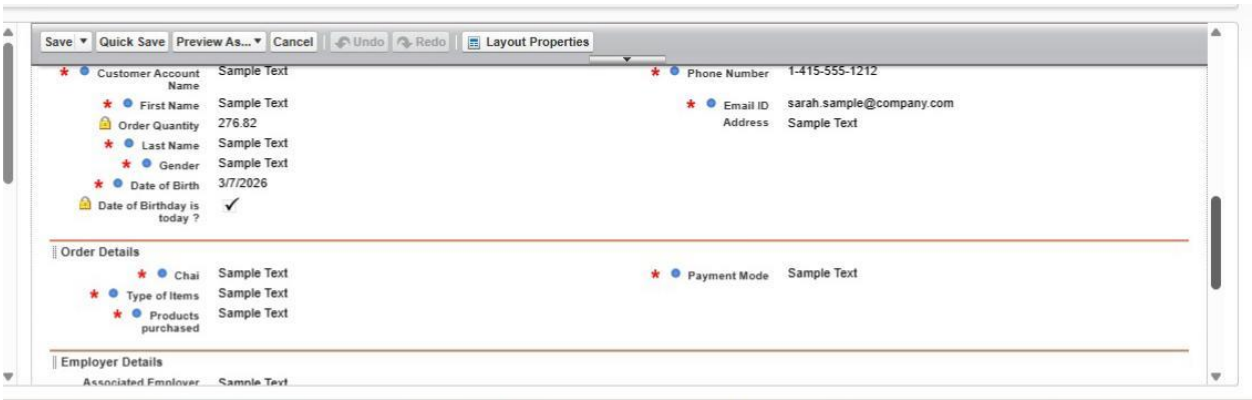
For the personalized field view in Customer Accounts, let's create two page layouts Online orders and Walk-In orders.

Activity 1: Online Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for Customer Account object.
2. Click on the Page Layouts → click New.

3. Page Layout Name : Online Orders and click Save.

4. Drag and Arrange all the required fields as shown below.



5. Click Save.

Activity 2: Walk-In Orders page layout

1. Go to the setup page → click on object manager → From drop down click edit for Customer Account object.
2. Click on the Page Layouts → click New.
3. Page Layout Name : Walk-In orders and click save.
4. Drag and Arrange all the required fields as shown below.

5. Click Save.

Milestone 8 – Record Types

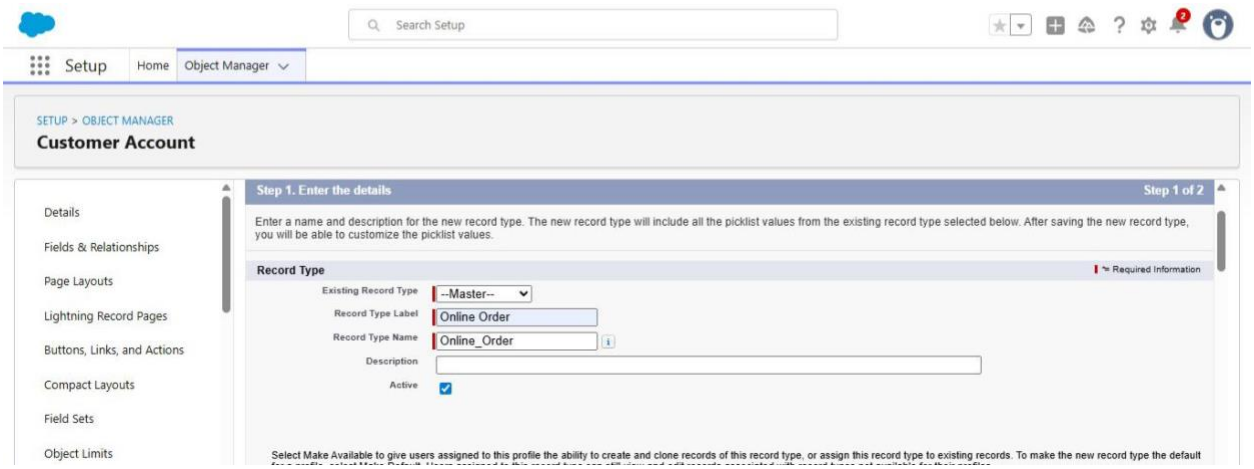
To Differentiate the records and data stored in Customer Accounts, let's create two Different Record Types.

Online orders and Walk-In orders.

Activity 1: Online Orders Record Type

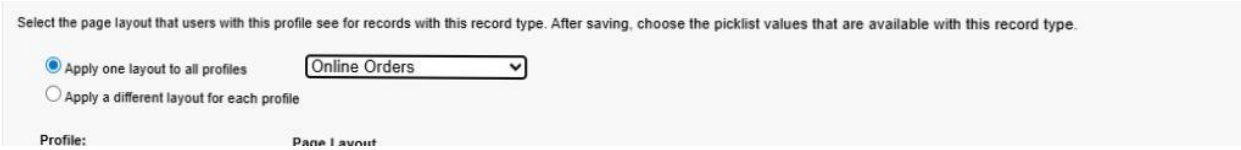
1. Go to the setup page → click on object manager → From drop down click edit for Customer Account object.
2. Click on the Record Types → click New.
3. Enter Details :
   Existing Record Type : Master

Record Type Label : Online Order
Record Type Name : Auto Populates
Active : Tick the checkbox
Click Next.



4. In Assign Page Layouts

- Select Apply one layout to all profiles : select Online orders from the drop Down menu.



5. Click Save and New.

Activity 2: Walk-In Orders Record Type

1. Go to the setup page → click on object manager → From drop down click edit for Customer Account object.
2. Click on the Record Types → click New.
3. Enter Details :

Existing Record Type : Master

Record Type Label : Walk-In Order

Record Type Name : Auto Populates

Active : Tick the checkbox

Click Next

4. In Assign Page Layouts

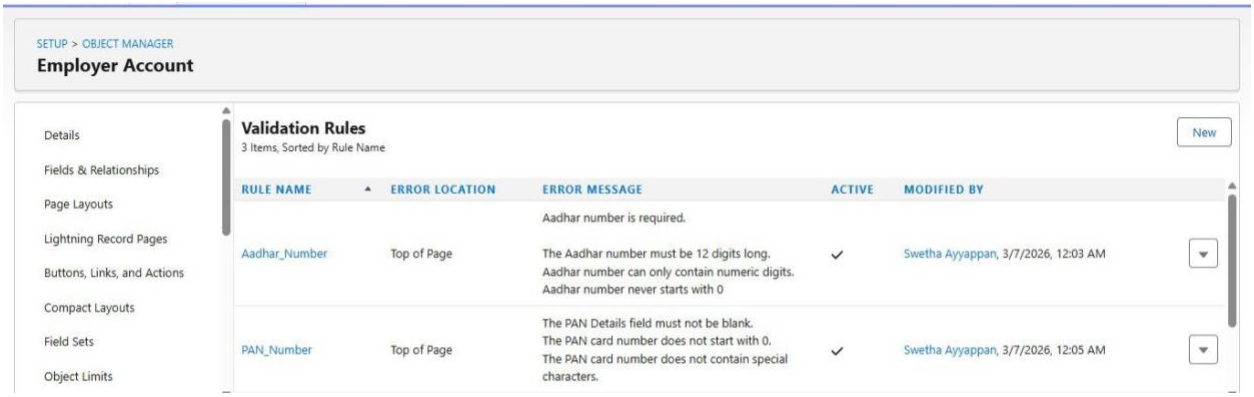
Select Apply one layout to all profiles : select Walk-In orders from the Drop down menu.

5. Click Save.

Milestone 9 – Validation Rules

Activity 1: On Employer Account

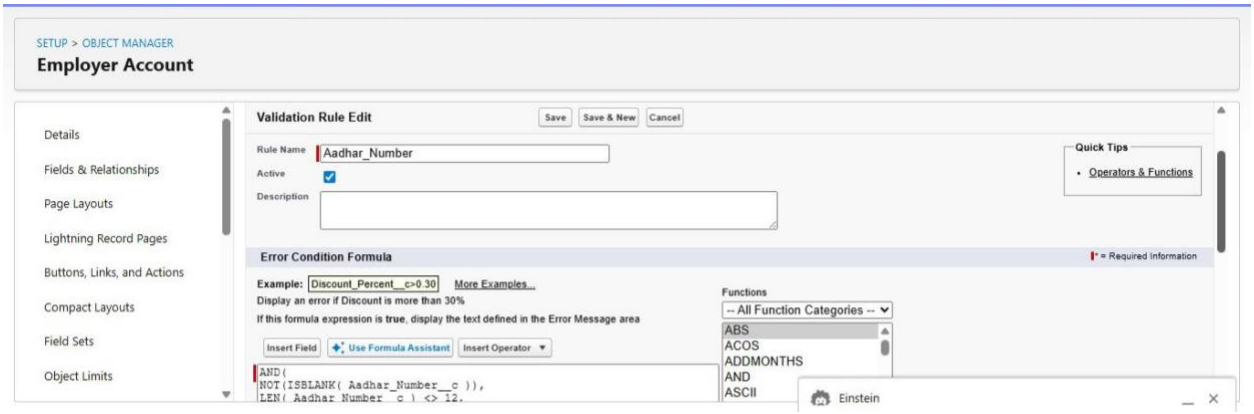
1. Go to the setup page → click on object manager → From drop down click edit for Employer Account object.
2. Click on the validation rule → click New.



3. Enter Rule Name : Aadhar Number

Error Condition Formula :

```
AND(
NOT(ISBLANK( Aadhar_Number__c )),
 LEN( Aadhar_Number__c ) <> 12,
 NOT(REGEX( Aadhar_Number__c , "^[1-9]{12}$"))
 )
```



4. Error Message : Aadhar number is required.

   The Aadhar number must be 12 digits long.

5. Click Save & New.

6. Repeat the same steps and create two more validation rules on the employer Account object.

- Enter Rule Name : PAN Number

Error Condition Formula :

AND(

NOT(ISBLANK(Phone_Number__c)),

NOT(REGEX(Phone_Number__c , “^[1-9]{10}$”)),

NOT(REGEX(Phone_Number__c , “^\\d+$”))

)

Error Message : The PAN Details field must not be blank.

The PAN card number does not start with 0.

The PAN card number does not contain special characters.

Click Save & New.

- Enter Rule Name : Phone Number

Error Condition Formula :

AND(

NOT(ISBLANK(Phone_Number__c)),

NOT(REGEX(Phone_Number__c , “^[1-9]{10}$”)),

NOT(REGEX(Phone_Number__c , “^\\d+$”))

)

Error Message :

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits(no spaces, dashes, parentheses, etc.)

Click Save.

Activity 2: On Customer Account

1. Go to the setup page → click on object manager → From drop down click edit for Customer Account object.
2. Click on the validation rule → click New.
3. Enter Rule Name : Phone Number

Error Condition Formula :

AND(

NOT(ISBLANK(Phone_Number__c)),

NOT(REGEX(Phone_Number__c , “^[1-9]{10}$”)),

NOT(REGEX(Phone_Number__c , “^\\d+$”))

)

Error Message :

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits(no spaces, dashes, parentheses, etc.)

4. Click Save.

Activity 3: On Enterprise Account

1. Go to the setup page → click on object manager → From drop down click edit for Customer Account object.
2. Click on the validation rule → click New.
3. Enter Rule Name : Phone Number

Error Condition Formula :

```
AND(

NOT(ISBLANK( Phone_Number__c )),

NOT(REGEX( Phone_Number__c , "^[1-9]{10}$")),

NOT(REGEX( Phone_Number__c , "^\\d+$"))

)
```

Error Message :

The phone number field must not be blank.

The phone number must consist of exactly 10 digits.

The phone number must contain only numeric digits (no spaces, dashes, parentheses, etc.)

Milestone 12 – Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a Significant stride in enhancing the store's operational efficiency and customer Relationship management capabilities. Seamlessly integrating employer details,Customer

information (both online and offline), and enterprise data, this application Streamlines business processes and enables informed decision-making. The Automation of sales calculations, including order quantity and total bill amount, reduces Errors and empowers employees to focus on delivering exceptional service. Moreover,

Automated email notifications for customers' birthdays foster personalized Communication and enhance customer engagement.

7. FUNCTIONAL & PERFORMANCE TESTING

During the testing phase, screenshots were captured from the Salesforce Lightning Interface to verify correct system behavior. These include:

- Record creation for Employer, Customer, and Enterprise objects
- Validation rule testing for Aadhar, PAN, and phone numbers
- Verification of record types and page layouts
- Formula field validation for order quantity and billing
- Flow execution for birthday email alerts
- Report and dashboard generation

Performance testing ensured fast response time and system stability during concurrent Usage.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement
- Real-time analytics

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

9. Conclusion:

The CRM Application for TheChaiShop&Co successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The System reduces errors, saves time, and enhances customer relationships through

Automation and analytics.

FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts
- Inventory management

- Multi-branch support
- Advanced customer profiling
